

**Tap Water Safe 100ml**

Tap Water Safe removes chlorine and other halogens, chloramine and heavy metals found in tap water, which are toxic to fish. Tap Water Safe also contains a special protective coating that reduces stress caused by transportation of fish.

**\$11.80**

**Filter Starter 100ml**

If left, fish waste will build up and become toxic. Filter Starter contains Bacillus megaterium, B. pumilis, B. licheniformis, Paenbacillus polymyxa, Nitrosomonas spp., Nitrobacter spp., and Nitrospira spp. These friendly filter bacteria break down fish waste, making the water safe for fish.

**\$11.80**

**Anti-Ulcer & Finrot 100ml**

Certain species of bacteria such as Aeromonas and Pseudomonas cause fin, mouth and body tissue to be eaten away. Early diagnosis is essential to prevent the infection becoming fatal.

**\$11.80**

**Anti-Internal Bacteria 100ml**

Certain species of bacteria such as Pseudomonas, Aeromonas and Vibrio bacteria can infect fish internally, causing an array of symptoms.

**\$11.80**

**Anti-Parasite 100ml**

Certain species of parasites such as Trichodina, Costia, Oodinium and flukes can cause fish to produce a whitish mucus layer, known as velvet or slime disease.

**\$11.80**

**Anti-White Spot & Fungus 100ml**

White spot is a protozoan parasite; the adults live on the fish and appear as tiny white spots. The adult has a complex life cycle which results in hundreds of free-swimming juveniles looking for a host fish to infest.

**\$11.80**

**Anti-Fluke & Wormer 20ml**

Fish (especially Discus species) are susceptible to internal worms. An obvious sign is when fish become very thin but continue to feed.

**\$11.80**

**Swimbladder Treatment 100ml**

Fish use their swimbladder for buoyancy and stability. When it becomes infected with Aeromonas or Pseudomonas bacteria, it can cause stress, which may result in death.

**\$11.80**

**Disease Solve 100ml**

Disease causing pathogens will be present in most aquariums although at low enough levels for fish not to show any symptoms.

**\$11.80**

**Algae Gone 100ml**

Green water/algae caused by over feeding and fish waste is unsightly in an aquarium, and can be dangerous as it may alter the pH and oxygen levels. Algae Gone is a single-dose, plant-friendly treatment that will clarify the green or cloudy water in your aquarium. It works by clumping the minute particles together enabling your filter to strain them out.  
**\$11.80**

**Aquarium Cleaner 100ml**

Sludge forms as a result of fish and plant waste, and uneaten food. Sludge needs to be controlled as it can harbour disease-causing pathogens and add to the ammonia loading of the water.  
**\$11.80**

**Liquid Filter 100ml**

When the water is cloudy, the billions of microparticles in Liquid Filter rapidly disperse throughout the aquarium and act like powerful miniature magnets to clarify the water, leaving it visibly clearer than before.  
**\$11.80**

**Marine Anti-Bacterial 100ml**

Symptoms of bacterial infections include: reddened wounds, ulcers, missing scales, eroded fins and/or mouth. White, sugar grain-sized spots covering the body indicate marine white spot (Cryptocaryon), while finer white spots are likely marine velvet (Oodinium). External parasites may also show scratching behaviour.  
**\$19.70**

**Marine Anti Parasite 100ml**

White, sugar grain-sized spots covering the body indicate marine white spot (Cryptocaryon), while finer white spots are symptoms of marine velvet (Oodinium). Both are protozoan parasite diseases and may cause the fish to rub themselves against rocks or other aquarium décor.  
**\$19.70**

**Marine Anti-Phos 100ml**

Stunted coral growth and the presence of unwanted algae is commonly an indicator of excessive phosphate in the water. Phosphate is a consequence of fish waste and while phosphate is essential for life, too much is detrimental. Phosphate is often also present in tap water, so can be inadvertently introduced during water changes.  
**\$39.40**

**Marine Anti-Aiptasia 100ml**

Aiptasia are polyp-like creatures found in marine aquariums usually introduced with corals or live rock. They can harm corals by outcompeting them for space and food as well as looking unsightly.  
**\$25.60**

**Marine Paratonical 100ml**

Following use of Marine Anti-Bacterial, Marine Anti-Parasite or Marine Anti-Fluke & Wormer to support fish recovering from white spot (Cryptocaryon), marine velvet (Oodinium) or skin fluke infections (Gyrodactylus). Paratonical is also ideal for minor wounds and torn fins.  
**\$19.70**

**Marine Anti-Fluke and Wormer 20ml**

Scratching behaviour without signs of white spot may indicate marine skin flukes. Symptoms may also include lethargy and reddened fins. Fish losing weight, giving a "pinched in" appearance, while still having a good appetite is an indicator of internal worms. Clear faeces from a fish's vent may also be present.  
**\$19.70**

**Fancy Goldfish 50g**

A slow sinking pelleted fish feed formulated for Fancy Goldfish  
**\$9.90**

**Probiotic Tropical 45g**

Probiotic bacteria increases digestion resulting in significantly less waste and cleaner water. Contains at-least 5 million viable probiotic cultures per gram.  
**\$9.90**

**Micro Crumb 40g**

Micro Crumb fish feed has been formulated for the smallest of fish with tiny mouths.  
**\$9.90**

**Shrimp Enhancer 40g**

A fish feed formulated specifically for Shrimp. This highly nutritious blend of animal and plant proteins assists exoskeleton and moulting.  
**\$9.50**

**Cattfish Pellet 60g**

This highly palatable fish feed has been formulated for tropical species of cattfish.  
**\$9.90**

**Nano Tropical 45g**

Pro F Nano Tropical fish food is designed for aquarium fish with smaller mouths such as Sparkling Gouramis, Galaxy Rasboras, Siamese Fighting Fish and Endler Guppies.  
**\$9.90**

**Algae Wafers 40g**

Algae Wafers provide a nutritionally complete diet for all herbivorous and omnivorous bottom feeding fish such as Plecostomus, Peckoltia, Otocincous, Panaque, Hypancistrus, bristlenose, sucking loaches and clown loach. Contains spirulina and other essential algae to suit the specific dietary requirements of algae eating species and krill meal enhancing palatability to omnivorous species.  
**\$9.90**

**Probiotic Marine 45g**

A probiotic marine food which supports immunity and reduces waste. Contains at-least 5 million viable probiotic cultures per gram.

**\$11.80**

**Algae Flake with Garlic 30g**

Pro-f Algae Flake with Garlic fish feed is a blend of phytoplankton, including spirulina and chlorella, expertly mixed with a number of key species of seaweed to provide the optimum nutritional elements required by herbivorous marine fish. The addition of garlic in this fish food helps to support fish recovering from parasites, and acts as a feeding stimulant for those more fussy species.

**\$21.70**

**Ocean Flake with Garlic 30g**

Pro-f Ocean Flake with Garlic fish feed is a blend of the most nutritional oceanic crustaceans, expertly mixed with a number of key species of marine algae to provide the optimum nutritional elements required by omnivorous marine fish.

**\$21.70**

**Marine Lab Multi-Test**

Marine Multi-Test comprises everything you need to carry out **155 tests** (combined) of the 4 key water parameters to keeping a healthy marine aquarium: **ammonia, nitrite, nitrate & pH.**

**\$64.90**

**Marine Lab Reef Multi-Test**

Reef Multi-Test comprises everything you need to carry out up to 145 tests (combined) of the 4 key water parameters to maintain a healthy and thriving reef aquarium: **KH, magnesium, calcium & phosphate.**

**\$78.70**

**Aquarium Lab Multi Test Kit**

The main factor in successful fish keeping and health lies in the maintenance of good water quality. Ammonia, nitrite and pH levels in the aquarium should be checked regularly. The Aquarium Lab Multi-Test Kit comprises up to 200 tests combined of the 6 key parameters to test in your aquarium: **ammonia, nitrite, nitrate, pH, GH and KH.** All the tests are liquid drop tests from a dropper bottle so all the drops are the same size.

**\$66.90**

**FOR KOI**

**Ulcer Swab 125ml**

When fish have open wounds and ulcers. These can easily become infected with bacteria or fungus. Ulcer Swab cleans and disinfects wounds and sores. The cleaned wound can then be sealed with Propolis Wound Seal to create a long-lasting waterproof barrier.  
**\$25.60**

**Paramedic kit**

When fish have cuts, abrasions or ulcers on their body. The Paramedic Kit has been designed to allow you to carry out basic first aid on your koi safely and hygienically to help fish recover as quickly as possible.  
**\$41.30**

**Koi Calm 10ml**

Use Koi Calm to make it easier to handle sick or injured fish in order to apply topical treatment.  
**\$13.80**

**Propolis 30ml**

Use to seal ulcers, damaged fins, open wounds and Hikui, preferably after cleaning these areas with Ulcer Swab antiseptic wound cleaner. Upon contact with water, propolis becomes insoluble, forming a waxy seal to help prevent pathogens or debris entering an open wound.  
**\$21.70**
